## Science - Animals Including Humans

### Animals and Their Offspring

Some animal adults and their offspring have different names.

### Being Healthy

Animals and humans have basic needs to survive:

To stay healthy we need:

To exercise

To eat the right food

To keep clean

We can find information about staying healthy from books and computers.

### Being a Scientist

Scientists ask questions about the things animals need to survive.

We can use research to find out about different animals.

### Key Vocabulary

Animal	Animals are a group of living things.	✓
Offspring	The children of an animal.	
Adult	The grown-up version of an animal.	
Research	Using books and ICT to find out information.	
Exercise	A physical activity that moves our bodies.	
Healthy	Healthy bodies are working at their best.	
Clean	We wash our hands and bodies to get rid of dirt and germs.	

Animals change as they grow into adults.

Young animals are normally smaller than adults

Most adults are stronger than their offspring

Some animals get taller as they grow

Some adult animals look very different to their offspring
